Expected release date: Monday 7 December 2020

Job Ads continue to gain in October

ANZ Australian Job Ads rose 9.4% m/m in October, following an upwardly-revised 8.3% in September, but remain 13.5% lower than the February level.

	Seasonally adjusted			
	Number	% m/m	% y/y	
Total job ads	129,544	9.4	-16.2	

See page 4 for technical details

ANZ Senior Economist, Catherine Birch, commented:

The ANZ Job Ads recovery maintained a steady pace into October, rising 9.4% m/m. Job Ads have now regained more than three-quarters of the plunge they took in March and April.

As we noted last month, though, we think Job Ads will need to exceed prepandemic levels for some time to ensure the ongoing recovery in employment and reduce labour market underutilisation. SEEK data show its job ads are already above pre-pandemic levels in most states and the Northern Territory, but there is some way to go in the ACT, New South Wales and Victoria. Nationally, ANZ Job Ads are still 13.5% below their February level, but the reopening of Melbourne will provide a boost from November.

As direct fiscal support drops off, leading some businesses to close or downsize, we expect some employment losses. But we may not see the same effect on Job Ads, as it seems unlikely that many businesses in a tenuous position would be recruiting. Business and consumer confidence will be critical to a sustained improvement in hiring activity and employment growth though.

ANZ Job Ads gained 9.4% m/m in October

Oct 2020	136,787	129,544	9.4	-16.2	

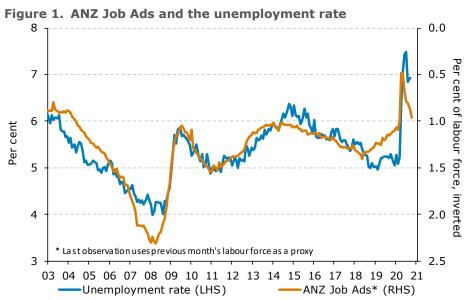

The internet series counts the average number of job ads carried by each of the sites contributing to the series on the same day of each week in the month indicated. The day (which is not necessarily the same for each site) is selected by the site operator as broadly representative of its activity levels.

The data are based on information provided by the operators of the following sites: Seek.com.au, and the Department of Education, Skills and Employment's Australian JobSearch site (Jobsearch.gov.au).

⁽a) Concurrent seasonal adjustment method (see Technical Appendix for further details).

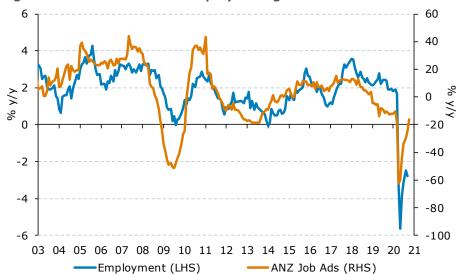

⁽b) The trend estimates came from applying a 13-term Henderson moving average to the seasonally adjusted series. This smoothing technique enables estimates to be produced for the latest month, but it also results in revisions to the most recent six months as additional observations become available.

The ANZ Job Advertisements series uses a concurrent seasonal adjustment methodology to derive the seasonal adjustment factors. This means that data from the current month are used in estimating seasonal factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the June 2010 reference month.

The concurrent adjustment methodology uses the most recent data every month, whereas the forward factor approach used it only once a year. Under concurrent adjustment, the seasonal factors will also be more responsive to underlying dynamic changes than forward factors.

Concurrent adjustment can result in revisions to the seasonal factors each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonal adjustment factors for the current month, the previous month and the same month a year ago.

The concurrent seasonal adjustment brings the ANZ Job Advertisements series in line with the methodology used by the ABS for its monthly employment data.

State and territory charts have been discontinued.

Note for editors

For some of the newspapers surveyed, the ANZ Job Advertisements series counts the number of advertisement 'bookings'. Each booking may contain multiple advertisements. In addition, the series counts classified advertisements only, and does not include display advertisements. For these reasons, it would be incorrect to draw any inference or correlation from the ANZ Job Advertisements series regarding advertising volumes or revenues from employment advertising in the newspapers surveyed. The series is not intended as and should not be used as a tool to assess the financial performance of any of the newspapers it draws information from.
